IBSTOCK BRICK

Latus Group UK delivered a **Chest X-Ray health surveillance program** tailored to the needs of Ibstock Brick. This program included comprehensive **lung health monitoring for 22 Ibstock employees**.

By establishing a baseline for lung health, Ibstock Brick can track employee health over time, adapting safety protocols and work practices based on individual health needs and potential risks. The early detection of respiratory conditions and proactive interventions help **safeguard employees from the long-term effects of dust and silica exposure**, reinforcing Ibstock Brick's commitment to workplace health and safety.

"All Latus employees that attended site were extremely professional, and followed all site rules, had nothing but positive feedback from my employees"

**Owen Crossan,
Ibstock Brick**
