

Occupational Health

EMPLOYEE GUIDE

Latus Group is your appointed occupational health provider. Our role is to carry out fair, confidential, and professional medicals and assessments that help ensure individuals are fit for their role and supported where adjustments or advice may be needed. All assessments are conducted by qualified healthcare professionals and handled in line with UK medical standards, data protection legislation, and clinical confidentiality.

MSK RAPID RESPONSE

A rapid response MSK assessment is conducted to provide quick access to assessment and triage for a new or worsening musculoskeletal problem.

A rapid response MSK assessment is typically used to:

- Assess acute pain or injury (back, neck, shoulder, knee, etc.)
- Rule out red flags that need urgent medical care
- Decide the right pathway (self-management, physio, imaging, specialist, or GP)
- Prevent conditions from worsening by acting early
- Reduce pressure on GPs, ED, or waiting lists

People are referred for this when they:

- Have sudden or severe MSK pain
- Have had a recent injury or flare-up
- Are struggling to function at work or daily life
- Need a fast decision about work restrictions or treatment
- Haven't improved with initial advice or medication
